

Stablecoins on Coreum

From Issuance to Advanced Financial Solutions

Coreum offers a robust infrastructure for issuing stablecoins with built-in liquidity, advanced management features, and seamless cross-chain compatibility, all within a regulatory-friendly network.

ISO 20022 Real-Time Settlements

With protocol adherence to the new financial messaging standard, Coreum supports compliant data and money transactions across financial institutions & blockchain ecosystems.

1.

Cross-Chain Interoperability

Coreum native assets can traverse across IBC-supported blockchains including Cosmos, EVM, and Solana as well as to the XRP Ledger.

2.

Minting, Burning, and Programmable Functions

Integrate advanced business logic starting from the token issuance stage: whitelisting, assigning burn rates, blacklisting and freezing.

3.

Stablecoins on Coreum

Issuance, Safeguarding, Global Payments and DeFi
